

# ASD®

ASD® offers an end-to-end structured cabling solution. Including both copper and fiber connectivity to support mission critical applications and deliver maximum performance, in the telecom room and at the workstation.

ASD® delivers the right solutions for all types of workplace environments with our complete iCAT-ITS™ product line includes:

- Copper Jacks
- Panels
- Patch Cords
- Wall Plates
- Fiber Connectors
- Cassettes
- Adapters
- Fiber Enclosures
- Pre-Terminated Solutions

Structured cabling is an industry governed by strict standards. Cat6 cable is by definition a twisted pair, 100 Ohm cable which has transmission parameters specified up to 250 MHz. Cat6 cable is also a recognized cable in addition to those specified in 4.2.2 of ANSI/TIA/EIA- 568-C.2. ASD iCAT Cat6 cable is 400MHz which exceeds the Cat6 minimum requirement of 250 MHz. Our product performance meets and/or exceeds the performance of the other leading manufacturer's products and is backed by a Lifetime Warranty.

Clients who work with ASD® enjoy the price advantage of buying direct. Unlike other manufacturers, ASD sells direct to the end user rather than through a distributor channel. This direct model saves approximately 30% on the cost of materials by eliminating the markups generated by traditional channels.
